

## COMPANY PROFILE

WE CREATE SAFE, EFFICIENT AND SUSTAINABLE WORK ENVIRONMENTS

We build the safety of people at work. With industrial safety guards, engineered solutions and consultancies, we transform warehouses and production lines in **safe, efficient** and **sustainable environments**.

# WE BUILD SAFETY

## WE BUILD THE SAFETY OF PEOPLE AT WORK

At Accessafe, we transform production lines and warehouses into safe, efficient and sustainable environments thanks to our **industrial safety guards**, creating a working environment where safety is not only a priority, but a daily certainty.

We offer **customised consultancies** that analyse the specific needs of each client, studying workflows, identifying critical areas and proposing the most suitable solutions for each situation, from training to the implementation of **comprehensive integrated systems**.

Our **engineered solutions** are designed with precision and attention to detail, ensuring not only maximum safety and adherence to international regulations, but also operational efficiency and environmental sustainability.

**WE BUILD TRUST IN SAFETY**

**3** GOOD HEALTH  
AND WELL-BEING

**8** DECENT WORK  
AND ECONOMIC  
GROWTH

**12** RESPONSIBLE  
CONSUMPTION  
AND PRODUCTION

We create and  
support  
a culture  
of safety

## WE TRANSFORM THE WORK ENVIRONMENT INTO A CONSTANTLY EVOLVING SYSTEM

In addition to providing physical and automated protections, we are committed to fostering a **culture of safety** among our clients by providing ongoing training and support. Our integrated approach is not limited to the physical protection of infrastructure, but extends to the intangible one.

We support our customers in the management of all phases that ensure the **constant efficiency of safety systems**: from risk assessment to design and production, up to the maintenance and continuous updating of the safety components of the systems and the related documentation.

Our activity actively supports the path of our clients towards achieving the Sustainable Development Goals of the United Nations 2030 Agenda, in particular: Goal 3 – Good health and well-being, Goal 8 – Decent work and economic growth and Goal 12 – Responsible consumption and production.

**WE BUILD SAFETY INNOVATION**

## WE DESIGN INNOVATION AND BUILD IMPROVEMENT

We want to make machinery and workplaces increasingly safe through our technical skills and the quality of our projects. For this reason, we have created the **Experience Centre**, an area dedicated to testing and improving the design and sustainability of our products, where **new technologies** and products made according to **EU Regulation 2024/1781 Eco-Design requirements for Sustainable Products** are experimented with.

The technical skills of our team are combined with state-of-the-art production facilities, which allow the **in-house construction** of all the components of the protection systems, so as to ensure total quality control.

Regardless of the size or complexity of the project, we guarantee this procedure for over **4000 orders** per year, from the safety remediation works of large plants to the machines placed on the market for the first time.

# WE BUILD SAFETY EFFICIENCY

Along the entire  
production line,  
of every industrial  
sector

WE COMBINE THE UTMOST  
SAFETY WITH THE HIGHEST  
EFFICIENCY

We offer integrated protection systems that cover **every stage of the production process**, ensuring safety, efficiency and ease of use.

Our commitment begins with with process analysis and the design of ad hoc solutions for our clients' **automation systems**.

Our protections are suitable for the **entire range of industrial machines**, contributing to the compliance of the process with regulations on health and safety at work. We design protections that allow a safe and efficient collaboration between operator and machine in every context.

We don't stop at production: our safety guards also extend to **logistics** and **warehouses**, where we offer safety systems that protect operators and assets, while ensuring a streamlined and organized work flow.

**WE BUILD SAFETY QUALITY**

## CERTIFIED QUALITY FOR FUNCTIONAL AND LONG-LASTING SYSTEMS

ICIM  
CERTIFICATION  
UNI EN ISO 9001

TUV NORD  
CERTIFICATION  
UNI EN ISO 14120

UKCA TUV NORD  
CERTIFICATION  
UNI EN ISO 14120

ICIM  
CERTIFICATION  
UNI EN ISO 3834-3

Our plant, our processes and our products are **certified** according to the highest **international** standards, ensuring that every mechanical, metalwork or digital component, is design and manufactured to offer maximum protection.

These certifications attest to our ongoing commitment to excellence and to providing our customers with reliable and compliant protections.

The **expertise of our technicians** in machine safety, risk assessment and compliance with EC requirements is internationally **certified** and enables the team to provide advice and customised solutions to meet the specific needs of each client.

For us, in fact, quality does not only mean ensuring certifications, but above all designing and producing **systems that are compatible with daily use** in the factory and that last over the years. Every detail is studied by integrating several factors: effective safety, current regulations, eco-compatibility, weight, visibility, ease of assembly and resistance to intensive use.

CMSE® - CERTIFIED

SAFETY

# WE BUILD SAFETY NETWORK

## WE BRING OUR PRODUCTS AND OUR SERVICES ALL OVER THE WORLD

With a widespread network of companies and distributors strategically located around the world, we are able to supply our customers quickly, guaranteeing consistent product and service quality.

## WE BUILD SUSTAINABLE SAFETY

## WE PROTECT WHAT MATTERS, EVERY DAY

We are strongly committed to the **proactive management** of environmental aspects, ensuring compliance with international directives, without losing sight of the effectiveness and quality of our products.

We decided to formalize and structure our development path of **ESG (Environmental, Social, Governance) criteria**, identifying a strategy that allows us to increase our commitment to sustainability in three key areas:

We protect  
the environment  
with  
eco-compatible  
designs

### Energy efficiency and emissions

The installation of photovoltaic systems and the adoption of LED lighting systems are just the first steps we have taken to achieve this goal. We are continuously engaged in exploring new technologies and solutions that can further reduce our energy consumption and carbon emissions.

### Materials and product eco-design

We understand the importance of using recycled and sustainable materials. The principles of eco-design not only minimise the environmental impact of our products, but also ensure that they are easy to assemble, disassemble and recycle, in line with Regulation (EU) 2024/1781 of the European Parliament and of the Council of 13 June 2024, which establishes ecodesign requirements.

### Circular Economy

We actively promote the principles of the circular economy, encouraging the reuse and recycling of materials. Our steel and aluminium products, for example, are easily disassembled, recyclable and at the end of their life cycle can be re-introduced into the production process.

We work to achieve continuous improvements and maintain **high standards of sustainability**, putting ourselves first in supporting virtuous practices for the environment while ensuring safety and compliance with current and future regulations.

WE BUILD THE FUTURE OF SAFETY

We invest for an  
industry 6.0  
ethics and  
responsible

## WE CREATE VALUE TODAY AND FOR OUR FUTURE

Building **well-being and protection** is an intrinsic component of our activities, not only for clients, but also within our organisation.

The maintenance of the safety and health of our employees in the work environment is carried out through **continuous, complete and carefully planned training**, accompanied by **strict checks** during all production phases.

We provide training courses dedicated to Health and Safety Managers, HSE Managers and industrial technicians, aimed at transmitting knowledge in the field

of industrial safety. These include the ISP® – Industrial Safety Professional course, with a TÜV Rheinland certified qualification.

We value and promote **diversity and inclusion**. This commitment is reflected in the incorporation of different personal needs and in the creation of a work environment free of discrimination. We firmly believe that an inclusive environment is the key to everyone's well-being and growth.

Our **corporate welfare** is designed to ensure concrete support for our employees, while our **commitment to the community** is manifested in support of local schools and universities.

We also promote internships and school/work support courses, offering young people opportunities for growth and professional development.

We are convinced that **supporting the local economy and culture** is essential for sustainable development. For this reason, we mainly use **suppliers** from our district and actively support **local artists**, including through the creation of a corporate art collection.

These initiatives are just the beginning of our journey towards a **sustainable future**, where the well-being and safety of people and the community will continue to be at the heart of our goals.

We create and support a culture  
of safety  
along the entire production line, in  
every industrial sector,

we protect the environment with  
environmentally friendly designs  
and by investing for an ethical  
and responsible 6.0 industry.
